EDUCATION

Western University

HSp Bachelor's of Computer Science

London, ON

September 2022 – August 2026

PROFESSIONAL EXPERIENCE

Lead Web Developer

Lens4you

July 2024 – July 2025

- Designed, developed, and deployed an e-commerce website using WordPress, HTML/CSS, and PHP.
- Integrated third-party plugins and custom features to support online sales and customer engagement.
- Performed ongoing site maintenance, updates, and optimization to ensure consistent uptime and performance.

Full Stack Developer

MyWishlist | JavaScript, React, PostgreSQL, Node.js

December 2024 – December 2025

- Built a social wishlist web application where users can create, share, and browse wishlists in a post-based interface.
- Developed a React frontend and Node.js backend with PostgreSQL for persistent user and wishlist data.
- Optimized database queries and backend routes to improve data retrieval performance.

Customer Service Representative

Wine Butler

July 2025 – September 2025

- Guided customers through Wine Butler's bottling services and maintained a comfortable, helpful service environment.
- Processed and input customer orders into the internal system with 100% accuracy, reducing order errors.
- Collected customer payments in person and online while supporting customers unable to bottle independently.

TECHNICAL PROJECTS

PokéBinder | *React, TypeScript, AWS Lambda, API Gateway, DynamoDB, Cognito, S3, CDK*

- Built a serverless digital Pokémon TCG binder app with user authentication, binder CRUD, card organization, S3 cover uploads, and public read-only sharing.
- Designed Lambda/API Gateway endpoints and DynamoDB access patterns for user-owned binders and efficient per-card-slot updates.
- Implemented AWS infrastructure with Cognito authentication, pre-signed S3 upload URLs, and infrastructure-as-code using AWS CDK.

bodb | *React, TypeScript, Node.js, Express, PostgreSQL, Prisma, OpenAI API*

- Developed a full-stack operations dashboard for small e-commerce businesses to track products, suppliers, orders, expenses, customer issues, margins, and operational alerts.
- Built analytics features for revenue, supplier costs, gross profit, expenses, estimated net profit, net margin, order status, expense categories, and top products.
- Implemented CRUD workflows, CSV imports, search/filter tools, charts, and backend analytics APIs, with a planned WooCommerce connector for store data syncing.
