EDUCATION

Western University

Honours Specialization Bachelor of Computer Science

London, ON

September 2022 – August 2026

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, SQL, HTML/CSS, PHP, Python, Java, C++

Frameworks/Tools: React, Node.js, Express, PostgreSQL, Prisma, WordPress, WooCommerce, Git, OpenAI API

Cloud/Concepts: AWS Lambda, API Gateway, DynamoDB, Cognito, S3, CDK, REST APIs, CRUD, Authentication

PROFESSIONAL EXPERIENCE

Lead Web Developer

July 2024 – July 2025

Lens4you

- Designed, developed, and deployed a production e-commerce website using WordPress, HTML/CSS, PHP, and WooCommerce.
- Integrated third-party plugins and custom features to support online sales, customer engagement, site operations, and performance.
- Maintained and optimized the website through troubleshooting, updates, and ongoing technical support.

Full Stack Developer

December 2024 – December 2025

MyWishlist | JavaScript, React, PostgreSQL, Node.js

- Built a full-stack social wishlist application where users can create, share, and browse wishlists in a post-based interface.
- Developed React frontend components and Node.js backend routes with PostgreSQL-backed user and wishlist data.
- Optimized database queries and backend routes to improve data retrieval performance and application responsiveness.

Customer Service Representative

July 2025 – September 2025

Wine Butler

- Guided customers through bottling services while maintaining a professional, helpful, and customer-focused service environment.
- Processed customer orders and payments with accuracy while supporting customers with varied service needs.

TECHNICAL PROJECTS

PokeBinder | *React, TypeScript, AWS Lambda, API Gateway, DynamoDB, Cognito, S3, CDK*

- Built a serverless digital Pokemon TCG binder app with authentication, binder CRUD, card organization, S3 cover uploads, and public read-only sharing.
- Designed Lambda/API Gateway endpoints and DynamoDB access patterns for user-owned binders and efficient per-card-slot updates.
- Implemented AWS infrastructure with Cognito authentication, pre-signed S3 upload URLs, and infrastructure-as-code using AWS CDK.

BODB | *React, TypeScript, Node.js, Express, PostgreSQL, Prisma, OpenAI API*

- Developed a full-stack operations dashboard for small e-commerce businesses to track products, suppliers, orders, expenses, customer issues, margins, and alerts.
- Built backend analytics APIs for revenue, supplier costs, gross profit, expenses, estimated net profit, net margin, order status, and top products.
- Implemented CRUD workflows, CSV imports, search/filter tools, charts, Prisma-backed PostgreSQL models, and AI-assisted business insights.
